

**Q13. Divide and Conquer $\rightarrow$ Recurrence Relation $\rightarrow$
 $T(n) = aT(n/b) + f(n) \rightarrow$ Master Theorem**

Q12. Algorithm → Best-case, Average-case, Worst-case →
Time Complexity → Performance Evaluation

Q14. Recurrence Relation → Substitution Method → Expansion → Guess → Induction → Verification → Complexity Derivation

**Q15. Recurrence Relation → Recursion Tree → Level Cost →
Height of Tree → Total Cost → Time Complexity**

Q11. Algorithm $\rightarrow$ Input Size (n) $\rightarrow$ Time Complexity $\rightarrow$
Asymptotic Notation $\rightarrow$ Efficiency
